

Definitions

product The answer when two or more numbers are multiplied together.

square number the product of a number multiplied by itself

$1^2 = 1 \times 1 = 1$
$2^2 = 2 \times 2 = 4$
$3^2 = 3 \times 3 = 9$
$4^2 = 4 \times 4 = 16$
$5^2 = 5 \times 5 = 25$
$6^2 = 6 \times 6 = 36$
$7^2 = 7 \times 7 = 49$
$8^2 = 8 \times 8 = 64$
$9^2 = 9 \times 9 = 81$
$10^2 = 10 \times 10 = 100$
$11^2 = 11 \times 11 = 121$
$12^2 = 12 \times 12 = 144$

cube number the product of a number multiplied by itself twice. $1^3 = 1 \times 1 \times 1 = 1$
 Example: $3 \times 3 \times 3 = 27$, so 27 is a cube number. $2^3 = 2 \times 2 \times 2 = 8$

$3^3 = 3 \times 3 \times 3 = 27$ 

$4^3 = 4 \times 4 \times 4 = 64$ 

prime number a number that is divisible only by itself and 1

Factors - they fit!

factor

Factors are numbers we can multiply together to get another number. They can be divided exactly into other whole numbers

common factor

factors that are common to more than one number

highest common factor

the highest factor that is common to more than one number

lowest common factor

the lowest factor that is common to more than one number

Multiples - they multiply!

multiple

a number that may be divided by another a certain number of times without a remainder.

common multiple

multiples that are common to more than one times table

lowest common multiple

the lowest multiple that is common to more than one times table

highest common multiple

the highest multiple that is common to more than one times table

Roman numerals

Symbol	Value
I	1
V	5
X	10
L	50
C	100
D	500
M	1000

I

Value

Xylophones

Like

Cows

Do

Milk

Always follow these rules:

1. If a smaller numeral comes after a larger numeral, add the smaller number to the larger number
2. If a smaller numeral comes before a larger numeral, subtract the smaller number from the larger number
3. Do not use the same symbol more than three times in a row.

Shape vocabulary

2D shapes

Key vocabulary

parallel

lines which stay the same distance apart

symmetrical

when two or more parts are identical after a flip, slide or turn.

perpendicular

lines which meet at right angles

irregular

all sides and angles not equal

regular

all sides and angles equal

angle

The amount of turn between two lines around their common point (the vertex).

2D shapes

Triangles

Properties

3 sides

3 vertices

3 angles

all angles add up to 180°

Types

Equilateral
all sides and angles equal

Isosceles
2 sides equal,
2 angles equal

Scalene
No sides or angles equal

Right angle
1 right angle

2D shapes

Quadrilaterals

Properties

4 sides

4 vertices

4 angles

all angles add up to 360°

Types

square

4 equal sides
4 right angles
opposite sides are parallel
4 perpendicular lines

rhombus

4 equal sides
opposite angles are equal
opposite sides are parallel

kite

2 sets of equal sides
no parallel lines

rectangle

opposite sides are equal
4 right angles
opposite sides are parallel
4 perpendicular lines

parallelogram

opposite sides are equal
opposite sides are parallel

trapezium

1 set of parallel lines
1 set of equal sides

2D shapes

Other polygons

pentagon

5

5 sides
5 angles

hexagon

six

6 sides
6 angles

heptagon

7 sides
7 angles

octagon

8

8 sides
8 angles

octopus

3D shapes

Key vocabulary

Edge

An edge is a line segment that joins one vertex to another:
 • where two faces meet on a 3D shape

Face

Any of the individual surfaces of a solid object.

Vertices/vertex

A point where two or more line segments meet. A corner.

3D shapes

Names

Cone
1 edge
2 faces
1 vertex

Cube
6 faces
12 edges
8 vertices

Cuboid
6 faces
12 edges
8 vertices

Triangular based pyramid
6 edges
4 faces
4 vertices

Sphere
1 face
no edges
no vertices

Cylinder
3 faces
no vertices
2 edges

Square based pyramid
5 faces
8 edges
5 vertices

Triangular prism
5 faces
9 edges
6 vertices
